- ✓ Credit is given for legibility, clarity of expressions and use of relevant illustrations.
- ✓ Clearly write your registration number on each answer sheet used

Task (60 marks)

You have been contacted by the CEO of CIMEN limited to build a website for his Cement and Construction Company. Below are the requirements of a section of the human resource module of the website. **Implement the following using HTML, CSS, Javascript, php and MySQL only.**

1. Create the homepage that has the picture of the company, welcome message, a header and footer. The logo should be on the top left corner of the page. The header should have a dropdown button (called department) that has ten departments from which only the administrator can access. **(10 marks)**

2. Create a Registration page, where a user (called an employee) can register. This page should ask details about the full name of the employee, home address, email address or phone number, username and password. Include a login page that will ask the employee his/her username and password. A password recover message should be sent to the employee email in case he or she has forgotten his or her login details. Beneath the login page should be a sign up button that should redirect the user to the registration page. **(15 marks)**

3. When an admin clicks on any department from the header section, that department page should open. Each of these pages should include a table of ten fields as indicated in the table below. Only the admin should be able to create, read, update and delete fields on this table and save them in the database. **(10 marks)**

	Field 1	Field 2							Field 10
1									
2									

4. Both the admin and employee should be able to export any of the elements from this table in (3) above in a pdf file. (When queries are written) **(10 marks)**

5. Only the Super Admin (Developer) can add other admins and these admins in return can add users (employees). **(5 marks)**

6. Database should be brought to the frontend (list of users, Admins and the Super Admin). **(5 marks)**

7. Adjust user's registration page so that it ask the user's department (add the dropdown button showing the various departments). Let the user's Department be enabled under the department dropdown button in the header section. This user can only update his/her details in the table. **(10 marks)**
